

# Mobile Veterinary CT & MRI Diagnostic Imaging

Since 2003, Burgess Diagnostics has grown to be the UK's leading provider of mobile, diagnostic CT (Computed Tomography) & MRI (Magnetic Resonance Imaging) services, exclusively for the veterinary sector.

Our aim is to make the latest diagnostic imaging tools accessible to and cost-effective for veterinary professionals to develop their client services. Ultimately helping you to deliver the best client and patient care.

## Flexible & Cost-Effective Scanning Services

The Burgess Diagnostics mobile imaging fleet, delivers flexible, cost-effective, and high-quality MRI and CT scanning services to veterinary sites across the UK & Northern Ireland.

We continually invest in our fleet of mobile scanners, which include a range of GE & Siemens CT scanners and Siemens MRI scanners, to ensure we provide the highest quality images for our clients.

The scanners are contained in trailer-mounted units that are spacious enough to comfortably accommodate the onboard imaging team, your veterinary staff, and of course the patient. Our drivers are experienced in manoeuvring the scanners into even the tightest locations and we offer a complementary site visit to check the appropriate access and parking is available.

The most effective way to power our scanners is via an external power box, further details can be provided on request. If a permanent power supply is not available our scanners can use their on-board generators.

## Specialist Veterinary-Trained Radiographers

Our specialist, imaging teams comprise of highly skilled veterinary-trained radiographers with a wealth of knowledge and expertise in all aspects of MRI and CT.

They are supported by our logistics team of experienced, medical HGV drivers who ensure the safe arrival, set-up, and departure of our scanners from your site.

*"Burgess Diagnostics consistently provides a prompt, efficient and helpful service. The staff are always professional and responsive when handling queries, making them a reliable partner for our diagnostic imaging needs."*

Julie Potts, Practice Manager,  
Frame, Swift & Partners

# Mobile CT & MRI Imaging Services

Our Scheduled Mobile CT & MRI Services offer you the flexibility to choose the appropriate frequency of our visits to suit your case load e.g. weekly, fortnightly, 4-weekly. A scheduled service gives you the reassurance of a regular scanning session so you can promote and build your imaging service and plan your caseload.

Alternatively, ad-hoc sessions can be arranged (subject to availability) when you need cover for a breakdown, maintenance or to meet additional demand for imaging.

To discuss your requirements and for details of our straightforward pricing by modality get in touch with our team.

By using the Burgess Diagnostics Mobile Imaging Service, you will be able to:

1. Keep more cases in-house.
2. Grow your practice revenue without a large financial outlay.
3. Deliver a comprehensive client service.
4. Offer more advanced services to your clients.
5. Provide the best patient and client care.
6. Develop your teams diagnostic imaging skills.

To assist you and your team in launching and growing your new imaging service, we offer the following range of complimentary support.

## GET IN TOUCH

 0845 3714012

 [burgessdiagnostics.com/get-in-touch](https://burgessdiagnostics.com/get-in-touch)

## Complimentary Support

### Direct Marketing Support

Bespoke direct marketing support is available through our marketing team, to help you launch and promote your new imaging service to your clients and referring vets. They can provide marketing content and guidance for social media posts, email communications, web content, and promotional materials.

### Pre-Launch Meeting

Prior to your first scanning session, we will arrange a meeting for your team with our Head of Clinical Services to check everything is ready to ensure your first session runs smoothly.

### Diagnostic Imaging CPD Session

To help you raise awareness of the key clinical applications of CT and/or MRI with your internal staff and referring vets, our Clinical Services team can deliver a complementary CPD session at your site or online.

### Clinical Support

Our experienced team of veterinary trained radiographers are available to provide advice on modality selection prior to imaging.

## Expand your patient services with CT

Unlike a traditional X-ray, a CT scan can differentiate between different types of soft tissue, such as muscle, blood vessels, and fluid with great clarity. Furthermore, angiography is easy to perform using iodinated contrast media.

CT scans can be used to investigate and diagnose a range of conditions & diseases in small animals as shown below. They can also be used to produce 3D reconstructions to facilitate planning for orthopaedic surgery.

With CT at your fingertips using the Burgess Diagnostics mobile CT service, you will be able to provide your clients with rapid, accurate diagnoses and ultimately provide the best patient care.

*"Regular access to CT & MRI scanning provided by Burgess Diagnostics has been a key means for us to expand the range of services and care we are able to provide to our patients."*

*Diagnosing conditions both earlier and non-invasively has been welcomed by vets and owners alike and is beneficial for a wide range of surgical and non-surgical conditions."*

Ross Allan, Clinical Director,  
Roundhouse Referrals

### CT Clinical Applications

Orthopaedic injuries and bone diseases  
Metastatic cancers  
Pulmonary disease  
Traumatic injuries  
Musculoskeletal disorders  
Nasal, ear, and oral diseases

### MRI Clinical Applications

**Brain Conditions:** Cranial Nerve Disease, Encephalitis, Epilepsy, Intracranial Disease, Meningitis, Metastasis.

**Spinal Disorders:** Intervertebral Disc Disease (IDD), Degenerative Myelopathy, Lumbar Sacral Disease, Diskospondylitis, FCE (Fibrocartilaginous Emboli), Syringomyelia, Arachnoid Cysts, Wobbler Syndrome.

## Transform your case management with MRI

The Burgess Diagnostics mobile imaging service can bring the cutting-edge capabilities of MRI directly to your site without you needing to make a large financial investment.

MRI produces images of the highest quality and clarity using non-ionising radiation. It is the gold standard for the investigation of brain conditions and spinal disorders.

With access to mobile MRI from Burgess Diagnostics, you will be able to take your patient care to the next level.
